	<b>Re: Booking Program</b>

There are two bug fixes for the booking program:

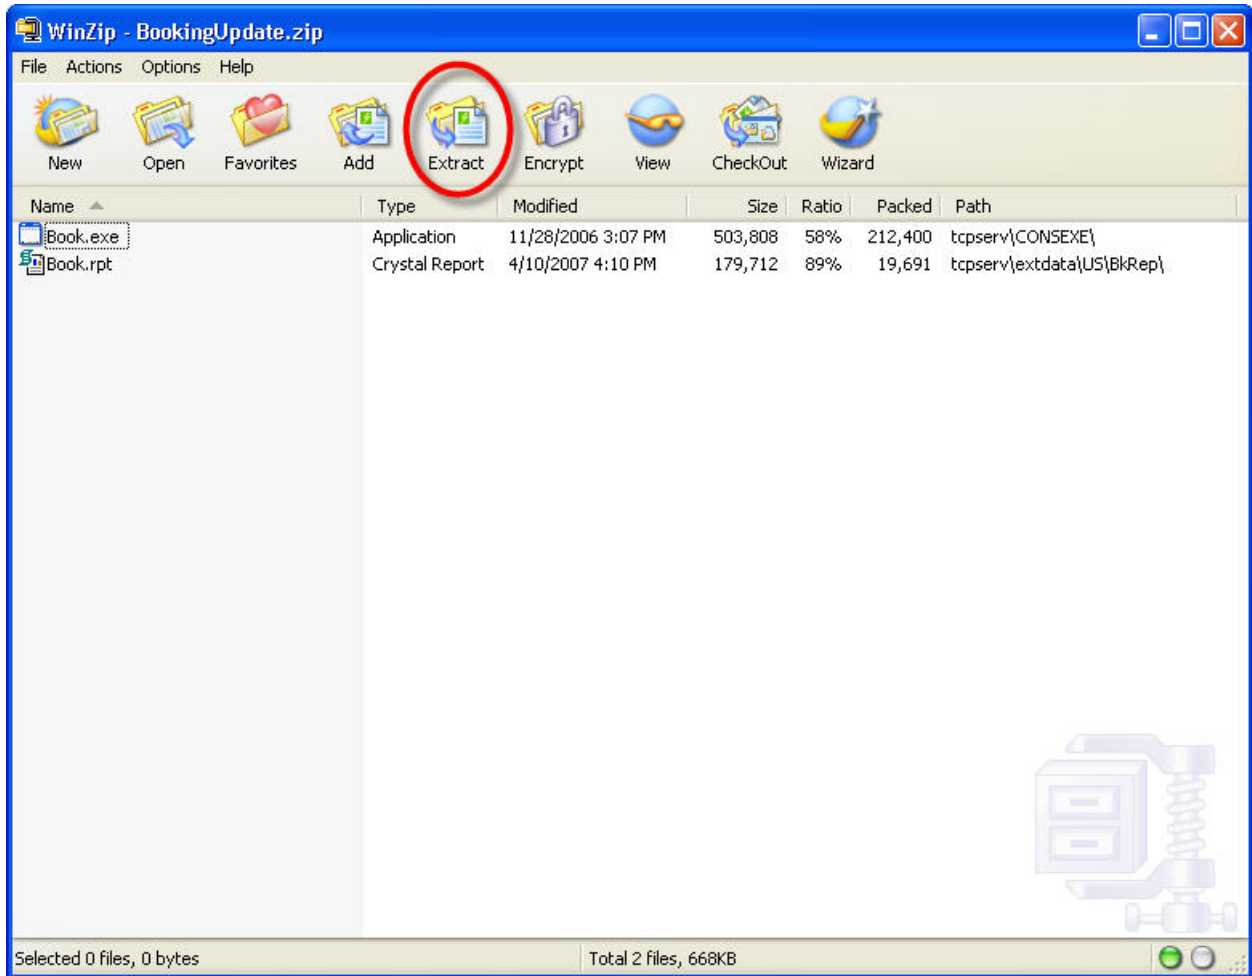

- A. **Booking program error:** Somehow the booking program is allowing reservations to be made for negative 1 minute. This booking shows up as a small thin red line at midnight and bowls for -1 minute, which of course is an error. This new patch solves this issue.
- B. **Booking report:** When you enter your leagues into the booking program that bowl every week, the booking report has a small error. The booking will show up in this report, but your lane numbers in use for this booking might be wrong. This new patch solves this issue.

This update can be done while your server computer, workstation computers, and lane computers are in use, just one note; we need you to EXIT the booking program that might be running on any of your PC's.

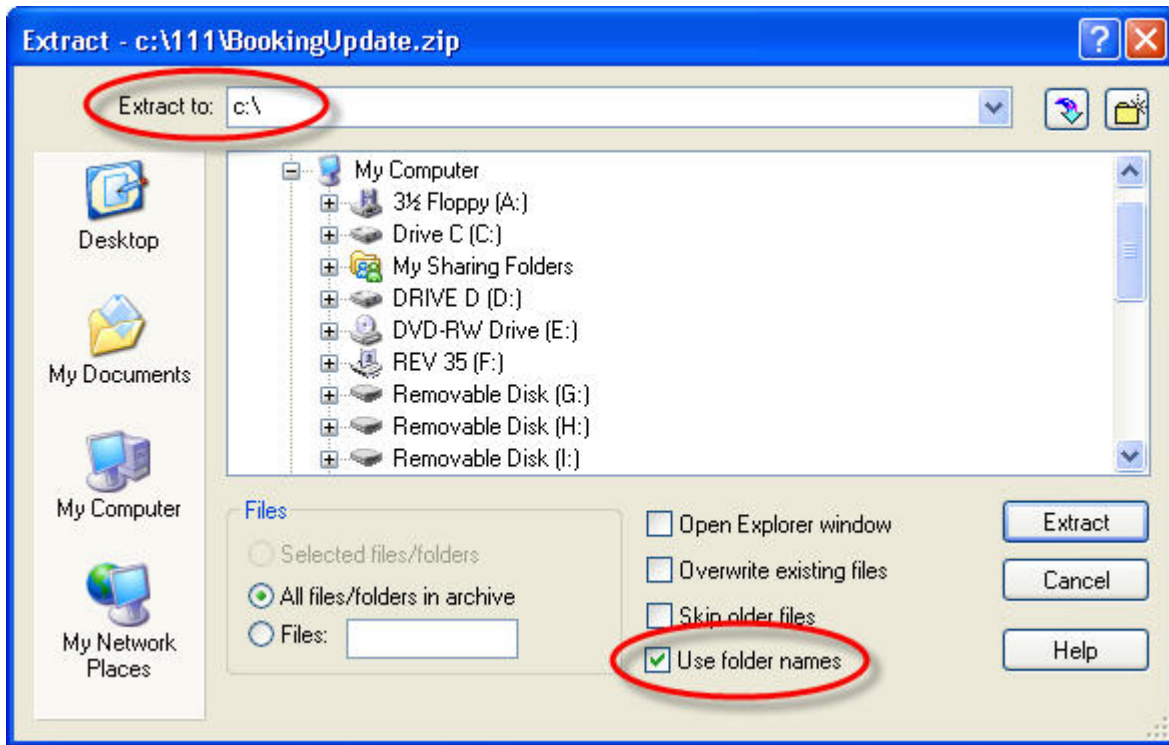

In your task bar, please verify the booking program is not running. If you see this program running below, please close it by right mouse clicking on it, then selecting close.

Using the attached Zip file, when you open this file, please click the extract button.

On the screen below, make sure you have selected the "Extract to:" window is set to C:\ and also verify the "Use Folder Names" box is checked.

You should now be complete with the new software. If you have any questions, please feel free to call us.

Sincerely,

A handwritten signature in black ink that reads "Jim Osdale".
